

THORGUARD

Lightning Prediction and Warning System

On the west side of Spring Rock Park atop the storage building west of the In line Rink we have the Thorguard Lightning Prediction and Warning System. This system is equipped with a strobe light and siren. Please make sure all your coaches and participants are familiar with how this system works. On the east side of Spring Rock Park atop the storage building near Central and north of the eastern most playing field there is a strobe light that blinks when system is activated.

Below is the explanation of the *ALERT* and *ALL CLEAR* signals. Be mindful of the systems horns and strobe light. We recommend, as does Thorguard, you take immediate and appropriate actions should the system alert sound.

ALERT!! (Take Cover)

HORN will sound for one - 15 second continuous blast.

STROBE LIGHT will turn ON and stay on until the all Clear.

ALL CLEAR!!

HORN will sound: three - 5 seconds blasts STROBE LIGHT will turn OFF.

SAFETY is NO ACCIDENT
