

# WELL 5 PROJECT

The Village is implementing a water infrastructure improvement plan, utilizing a low interest loan from the IEPA's revolving loan program. In 2015 the Infrastructure Commission published the well #5 Proposed Locations Report. The construction of a new deep well for the Village's water supply has been approved by the Village Board and is scheduled for construction in 2019. The Village has secured funds for the construction of the well through the IEPA. Drilling is currently ongoing and the final construction process is anticipated to bring the well online in 2020.

The completion of the new well will allow the Village to decommission Well #1, its oldest well, constructed in 1924.
